Hello David:

I have been working with GZA, Andrew and he requested from the Town if any permits or approvals are needed for your project. It appears that you will be working in/around existing utility poles and performing environmental sensitive protection and this is an equipment upgrade. The Town of Allenstown is all set and will approve your project and there are no local permits to secure. Thank you for reaching out to us and hope that the work is successful.

Subject: G146 Transmission Line Project

Good morning Derik and Chad,

I am reaching out to let you know about an upcoming project in Allenstown. We are planning on replacing all remaining wood poles on the G146 transmission line with steel. The current wood structures are constructed of a laminate wood in which severe internal rot issues were identified. This project seeks to replace all laminate wood structures to increase system reliability. The softened wood is prone to woodpecker damage as well as damage from ants and other pests. Poles are also very susceptible to cracking along their length, creating points of entry for water, resulting in splits, bending and rot.

The new steel poles will result in greater electric reliability for local communities because they are resilient and will not be susceptible to woodpecker damage, insect damage or pole rot. The new steel structures will also have enhanced structural integrity to protect the system from damage due to severe weather.

We are in the process of securing local and state permits and will be in touch as we get closer to construction. Below I've provided a few more details about this project. Attached is a letter that was mailed to all abutting property owners.

Allenstown
Scope: Replace 37 existing laminate wood structures with weathering steel structures.
Locations: Dowst Rd, New Rye Rd, Black Hall Rd, Phillbrick Rd
Schedule: Pending permit approvals, start construction Q3 2023.

-
Please let me know if you have any questions or want to discuss further.

Thanks,
Dave
